

Kineton MediaCert is a modular, decentralized, and user-friendly platform for supporting manufacturers and CE operators in certifying compliance with HbbTV and other specifications.

The platform allows not only importing but also creating new test suites or other test cases based on HbbTV and other standards from scratch. Custom test profiles can be created for use during testing, and supporting information can be added to executed tests, reporting errors and warnings. The new Kineton product configures and manages the network environment for dedicated testing and can simulate real-world conditions to adapt the TS bitrate. Automatic file synchronization between the platform and host is performed for TS execution. With easy configuration, Kineton MediaCert is compatible with DekTec modulators.

TESTING HAS NEVER BEEN EASIER.
